

ISI Announces April 2013 Release of Snapshot Version 8.0 to Support 64 bit Operating Systems

Infrastructure Solutions, Inc. (ISI) announces that Snapshot Version 8.0 will be released on April 22, 2013. This release supports 64 bit Windows operating systems and Windows 8.

Minneapolis, MN ([PRWEB](#)) March 27, 2013 -- Infrastructure Solutions, Inc. (ISI), a leading provider of IT infrastructure assessment and optimization software products and services, announces ISI Snapshot Version 8.0 will be released on April 22, 2013. This release supports 64 bit Windows operating systems and Windows 8. Snapshot 8.0 will provide continued support for 32 bit operating systems. With this new release partners and clients will be able to deploy the powerful features of Snapshot with additional functionality:

- Supports Windows Server 2003, 2008, 2012
- Supports Windows XP, Vista, Windows 7, Windows 8
- Support of SQL2008 Express
- New ISI developed web-based license activation application

With support of SQL2008 Express, Snapshot's "companion" database will handle larger configurations and an individual database size of 10GB. Snapshot will have continued support for client and partner supplied SQL databases. The new ISI developed web-based license activation application streamlines and replaces Snapshot's embedded licensing software. Snapshot license requests and license key issuance are now automated.

"A key focus at ISI is working with customers to help them reduce costs and save energy. This new release of Snapshot allows us to handle larger configurations and more machines which translates to doing more for our customers," said Willard (Bill) Cecchi, President, ISI. "In this tough economic market we recognize how important resource conservation is and we are pleased that Snapshot continues to keep business critical applications available and cost effective for small, medium, and large enterprise businesses."

Snapshot's existing unique features include safe, non-invasive, read-only, agentless discovery; reliable operation on physical, virtual and cloud IT infrastructures; support of multiple hypervisors including vSphere and EXSi; support of unlimited number of devices (avoiding the inconvenience of duplication error checking and manual integration for multiple analysis runs); and the ability to quickly handle any size configuration (can scan up to 500+ devices/hour). The application delivers detailed and complete information on all IT system components, operating systems, infrastructure interdependences, configurations, network traffic flow patterns, and application workloads and dependencies. In addition, Snapshot continues to provide advanced metrics and feature rich reporting capabilities.

To learn more about ISI's Snapshot 8.0 or Snapshot Software Suite(TM) or ISISCon(TM), or to request a demo, please visit our website at <http://www.isiisi.com> or contact us at [sales\(at\)isiisi\(dot\)com](mailto:sales(at)isiisi(dot)com).

Infrastructure Solutions, Inc. (ISI) is based in St. Paul, Minnesota and has been providing leading software solutions to enterprise IT organizations worldwide through distinguished international channel partners, including IBM and Cisco Systems, Inc. ISI products help organizations assess, design, cost analyze and manage the consolidation and/or virtualization of IT infrastructure and network software between physical, virtual, and cloud platforms (P2V, V2V, V2P, V2C).
